Phil,

Here are HQs comments on the San Jacinto exposure factors. I'm going to a Proposed Plan public meeting for Star Lake tomorrow, and will be on leave next week – maybe we can discuss this the following week?

Thanks,

Gary Miller

Gary,

In addition to comments that I had sent you on the PRP's use of a TDI for estimating cancer risks at the San Jacinto site, attached are comments on the PRP's use of a number of exposure factors along with comments on their bioavailability value.

Please let us know if you have any comments on the attached or need any assistance in providing a response to the PRP's letter. In addition to our concerns regarding exposure factors, their letter tied in proposed recommendations at the San Jacinto site to work being done at the Tittabawassee site in Region 5.

Marlene

Marlene,

Please see the TRW Bioavailability committee's comments on San Jacinto.
